

Utilizing Australian Native Plants in Constructed Floating Wetlands to Remove Nutrients to reduce Cyanobacteria formation in Urban Stormwater

8th ANZ Cyanobacteria Workshop

26 - 27 September 2023

By: Thanusshan Packiyarajah
University of South Australia

8th ANZ
Cyanobacteria
Workshop

- ✓ High nutrient concentrations and cyanobacteria formation are major concern in stormwater reuse i.e., colour change, salinity etc
- ✓ Evaluate the performance of Constructed Floating Wetlands in various environmental conditions
- ✓ Reduce pollution associated with urban runoff and remove excess nutrients within aquatic environments by using CFWs
- ✓ Using local plant species in a Mediterranean climate under various environmental conditions

Contact pathway

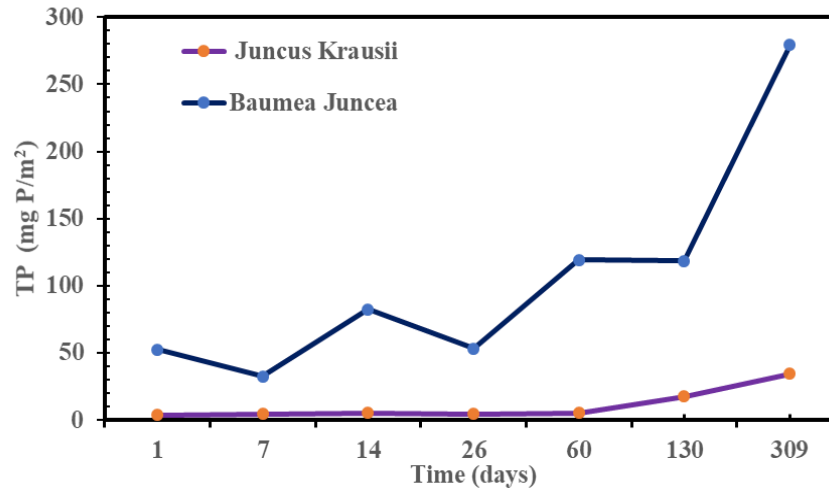

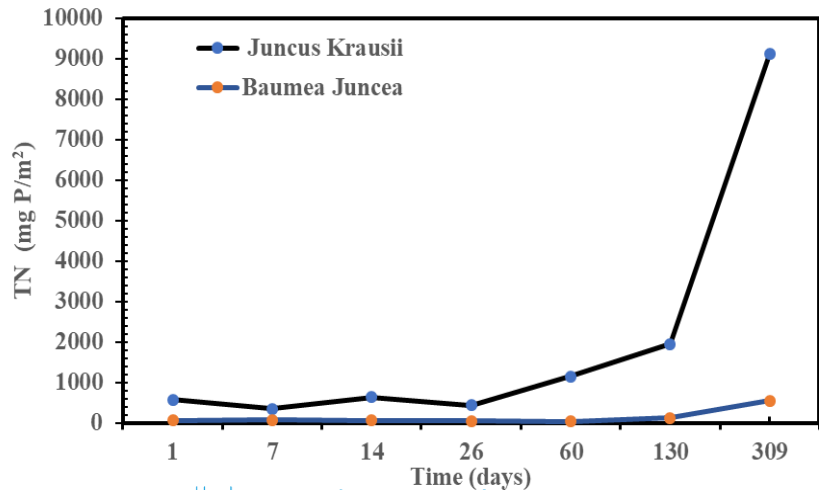

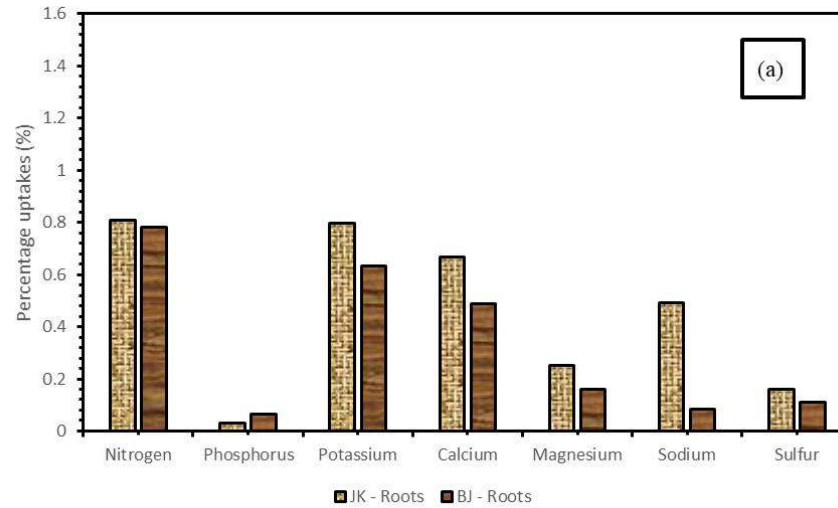

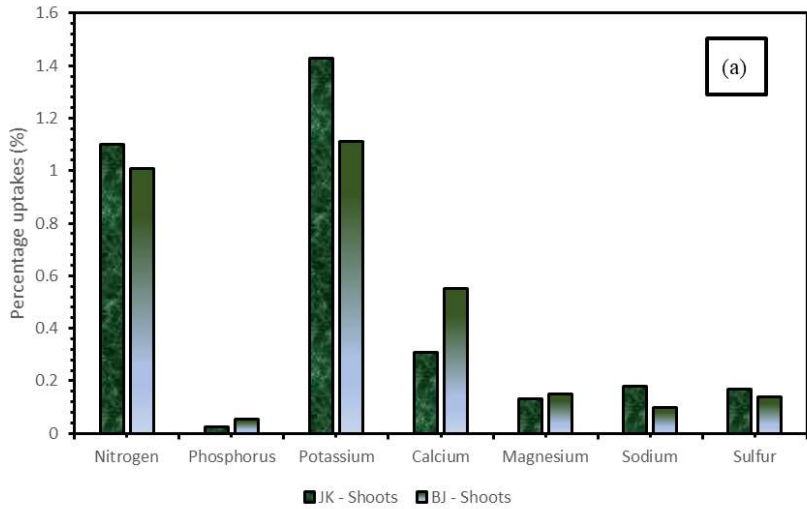

Effects of cyanobacteria bloom on human body

Sharma, Vymazal and Malaviya, 2021

- ✓ CFWs are designed and constructed to mimic natural floating wetland systems and their water treatment capabilities
- ✓ Flexible to be incorporated into existing urban water bodies
- ✓ Setup and act as a hydroponic system
- ✓ Soil less planting innovation by coordination biological and building efficiently in feasible manner
- ✓ Microbial Analysis - The proprietary and novel method by using the Dneasy PowerSoil Kit to isolate the genomic DNA from the collected samples
